DETAILED ACTION

Response to Amendment

1. Examiner acknowledges the amendments made on the claims. Claim 6 has been canceled.

Response to Arguments

2. Applicant's arguments, see page 9, lines 13-22, filed on October 15, 2004, with respect to claim 6 have been fully considered and are persuasive. Examiner noticed the translation of the application JP 11-237061 submitted on October 15, 2004 to obviate the rejection made on claim 6 now incorporated in amended claim 1 now incorporated in amended claim 1 with Ogata, US Patent with filing date of November 17, 1999. Examiner acknowledges that the subject matter in claim 1 as amended is supported by the disclosure of JP 11-237061.

Allowable Subject Matter

3. Claims **1-5** and **7-17** are allowed.
4. The following is a statement of reasons for the indication of allowable subject matter:

Regarding **claim 1**, the primary reason for indication of allowable subject matter is that the prior art fails to teach or reasonably suggest an interpolation coefficient table storing an interpolation coefficient; a correction section for correcting the interpolation position so as to correspond to the interpolation coefficient; and an interpolation calculation section for interpolating the pixel using the interpolation coefficient for the corrected interpolation position.

Yamada discloses an electronic camera (First embodiment, Fig. 1) comprising: an image-sensing unit (Fig. 1: 2) for electronically sensing an object image and outputting image data of the object image; a memory unit (Fig. 1: 4) for storing the image data output from said image sensing unit; an image processing unit (Fig. 1: 5) for performing predetermined image processing based on the image data stored in said memory unit; an interpolation calculation circuit (Fig. 1: 6) for interpolating a pixel whose data is not present in the image data after image processing by said image processing unit by interpolation calculation based on an approximate expression including a polynomial of at least 3rd-order (Col. 7, line 66 – col. 8, line 18; col. 9, lines 43-65), Yamada also teaches a recording unit for recording the image data after interpolation on a recording medium (Fig. 1: 10) (Col. 7, lines 12-18). Yamada also discloses the use of a display unit for displaying the images data after interpolation (Col. 1, lines 28-39). In another embodiment (Fig. 20), Yamada teaches the image stored at the memory unit (Fig. 20: 54) memory being interpolated by the interpolation processing circuit (Fig. 20: 55) and writing the image data after interpolation in said memory unit (Col. 29, lines 1-11 and lines 46-61), also teaches that the interpolation calculation circuit comprises: a calculation section for calculating an interpolation position of a pixel (Col. 7, line 66 – col. 8, line 18), but does not explicitly teach or reasonably suggest an interpolation coefficient table storing an interpolation coefficient; a correction section for correcting the interpolation position so as to correspond to the interpolation coefficient; and an interpolation

calculation section for interpolating the pixel using the interpolation coefficient for the corrected interpolation position.
